

St Mary The Virgin Norton Sub Hamdon Parochial Church

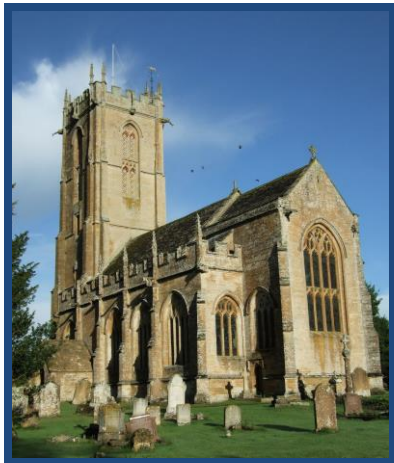

Future Church Improvements

A sub-committee of the PCC is looking at various possible developments that could be introduced into the church building with a view to improving facilities for church users, (including concert arrangements). One example is the provision of improved electricity supply, another is draught-proofing.

These possibilities are being discussed with the Diocesan Architect/Adviser at present and will involve the Diocesan Advisory Committee (based in Wells). Their formal approval will be required for some of the considered items.

There are of course varying levels of cost involved, dependant on the improvement selected. However, once the list is finalised a plan will be developed scheduling introduction dates and fund raising (including any available grants) targets.
